

Attention Anglers

Fin Clipped Kokanee

Marked Kokanee have been released into Stampede Reservoir. Marked fish are identified by the absence of an adipose fin (see image above)

The adipose fin was removed at the hatchery prior to release into the reservoir. The purpose for this mark is to identify fish stocked by the CDFW from fish naturally produced in the reservoir.

If you catch a marked Kokanee, please indicated this along with other requested angling information on the Online Angler Survey Report:

KOKANEE AND INLAND CHINOOK ANGLER SURVEY
